SNIPER ELITE®

OPERATION KRAKEN

EXPANSION RULES

A game by **Roger Tankersley** & **David Thompson**

SNIPER® ELITE

OPERATION KRAKEN

An operation that could end the war before it begins.
A colossal war machine is ready to stop the Allies in their tracks.
The time for hesitation has long passed.

ONE BULLET CAN CHANGE HISTORY

Sniper Elite: Operation Kraken is a set of expansion maps for the board game *Sniper Elite*. It requires a copy of the main game to play.

THE NORMAN VILLAGE

Infiltrate a ruined Norman Village to find intel on Operation Kraken, but beware of the defenders' new armoured cars patrolling this open map.

THE SUPER CARRIER

Stow away aboard the massive Super Carrier to sabotage the operation before it culminates, crawling through air ducts armed with explosives and lockpicks.

COMPONENTS

MAP PIECES

1 Main Board (double-sided)

Side 1: Super Carrier

Side 2: Norman Village

18 Objective Cards (2 sets of 9 cards)

21 Solo Cards

11 Door Tokens

Locked *Open*

DEFENDER PIECES

2 Vehicle Miniatures

2 Vehicle Cards

Back *Front*

SNIPER PIECES

1 Explosive Entrance Token

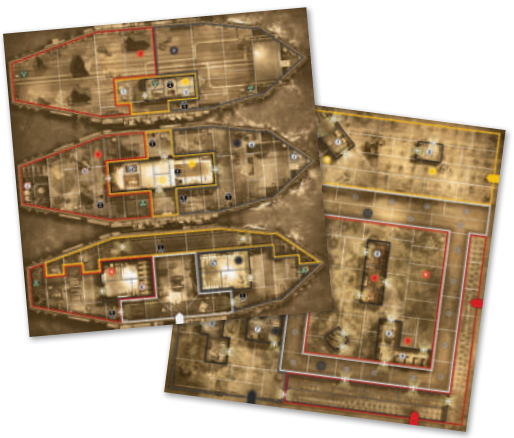

2 Loadout Cards

Front *Back*

2 Hidden Boards (1 for each side of the main board)

NEW LOADOUT CARDS

Add these to the existing loadout cards to give the sniper more options in their approach when playing on the Super Carrier. **Do not use on other maps.**

MAP BREAKDOWN: NORMAN VILLAGE

The Norman Village offers plenty of cover for the sniper, but they'll need to be on guard; the defenders have been reinforced with two armoured cars.

UNIQUE ELEMENT: VEHICLES

Patrolling the Norman Village are two Leichter Panzerspähwagen vehicles.

Setup

Place a vehicle miniature on each of the two spaces marked with a vehicle start icon.

Place the two vehicle cards face up where everyone can see them. It does not matter which vehicle begins on which start space – they both work the same way.

Spaces with either a vehicle start icon (above) or a vehicle access icon (right) are **roads**. Vehicles can only move onto or through road spaces. They can take other actions, such as sweeping or attacking, that affect non-road spaces.

Embarking & Disembarking

When a unit **finishes** a move action in the same space as a vehicle, it **must** embark. Place the miniature on the corresponding vehicle card. A unit **cannot** end its movement on a space with a vehicle that already has a passenger.

To disembark, a unit inside a vehicle must take a move action. Place them in the same space as the vehicle, then move them up to 2 spaces as normal, ending their movement on a different space than the vehicle.

Vehicle Actions

The defenders have access to the following unit actions, available only to units embarked in a vehicle. Embarked units may still take normal unit actions.

- **Drive 3:** Move the vehicle up to 3 road spaces. It may move through other units and vehicles but cannot end its movement on the same space as another unit or vehicle.
- **Drive 1 & Sweep:** Optionally move the vehicle 1 road space, then sweep the current space plus 2 matching-adjacent spaces.
- **Drive 1 & Spot:** Optionally move the vehicle 1 road space, then spot 1 adjacent space, adding noise to the sniper's bag if found.
- **Attack Adjacent:** Attack 1 adjacent space, dealing a wound.

As always, you cannot take two of the same action with the same unit, but you can take similar actions. So a single unit in a vehicle could both Drive 3 and Drive 1 & Sweep to move four spaces and then sweep, or both Attack and Attack Adjacent to attack two different spaces.

Vehicles and Sniper Movement: The sniper may enter spaces with unoccpuied vehicles, but not occupied ones. Embarked units count as being in the space their vehicle is in for the purposes of being alterted by noisy movement. Empty vehicles are not alerted by the sniper's movement.

Shooting Vehicles: The sniper can target a vehicle with a shoot action exactly like any other unit – with one exception. Vehicles have **armour 2,** which means that, in order to successfully hit the vehicle, you must draw 2 more aim tokens than you would normally require for a target in that space. That means you must always draw at least 3 aim tokens to hit a vehicle, even if you're attacking from the same space.

A successful shot removes the vehicle from the board. If a unit was in the vehicle, it is killed. If you kill a soldier or an officer in this way, add an aim or suppression token to the shot bag as normal. You don't add any tokens for destroying the vehicle.

Once a vehicle has been destroyed, it cannot return to the board for the remainder of the game.

Loadout cards that immediately kill units, such as the knife, S-mine, or trench gun, have no effect on vehicles or embarked units. Loadout cards that affect enemy movement, such as distraction, can force a defender to disembark as part of its movement, but cannot move a vehicle.

UNIQUE ELEMENT: MULTIPLE ENTRANCES

Three sectors in the *Norman Village* have two arrows leading into them, which the sniper can use to enter the board. As normal, when entering the board, the sniper may not enter via an entrance **in the same sector** as one of their objectives.

SOLO RULES: NORMAN VILLAGE

Unique Deck

During setup, do not use **any** of the solo cards marked "all locations." Instead, use only the solo cards marked "Norman Village." They can be easily differentiated by their backs. Follow the other setup rules as normal.

Mechanised Defences

In the solo mode, the two vehicles act independently of defenders, and defenders **cannot** embark vehicles.

You can shoot vehicles, and doing so grants you the benefits of a successful shot as normal (that is, adding or removing tokens from the shot bag).

Drawing noise tokens **never** causes a vehicle to move.

When an assignment solo card is resolved, both vehicles deploy **regardless** of the LKS. If there is only one vehicle left on the board, use the SNAFU rule (anytime there are multiple possible outcomes, always choose the worst outcome for you) to determine which indicated space to deploy it to.

When a solo cards directs defenders to take actions, this does not apply to vehicles, **unless specified.**

MAP BREAKDOWN: SUPER CARRIER

Stowed away in the Super Carrier, the sniper must make their way through its multiple levels to succeed on this mission. With reinforced walls and locked doors blocking their way, they will have to crawl through air ducts or make judicious use of explosives to evade capture.

UNIQUE ELEMENT: THREE LEVELS

The *Super Carrier* is divided into three levels: a top, middle, and lower deck. You cannot move outside the edges of the ship, nor can you see or move between levels other than via **ladders** and **air ducts**.

Ladders (for Sniper & Defender use)

Two spaces with corresponding ladders icons (matching letters) are **adjacent** for the purposes of movement, noise, and spotting. They also have line of sight to one another. They are **not** matching-adjacent, so defenders cannot sweep one space from the other. You don't have line of sight to any other spaces on another level.

Air Ducts (for Sniper use only)

Two spaces with corresponding air duct icons (matching letters) are **adjacent** for the purposes of movement and have line of sight to one another **for the sniper only** (but not noise). They are **not** matching-adjacent. You don't have line of sight to any other spaces on another level. For the defenders, the air ducts are not adjacent.

Sectors

The sectors of the *Super Carrier* are split over the three levels, but otherwise function as normal. There is only one entrance, which the sniper will always use to enter.

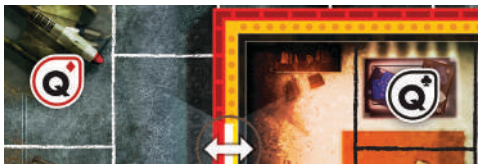

Objectives

Some objective cards for the *Super Carrier* are face cards (Jack, Queen, and King).

If you draw two objective cards that have the same card value, return one of your choice to the bottom of the deck and draw a new one (exactly as when you draw two cards of the same suit). Your objective is the space on the board with the icon matching the suit of the face card.

> If the sniper completes the Queen of Spades objective in the yellow sector, the defenders know that the sniper cannot be heading for the objective marked Q in the red sector.

UNIQUE ELEMENT: NEW DEFENDER ACTIONS

Lock/Unlock Doors

As a part of a move action, a unit can lock or unlock a door in the space they're in. Doing so uses up 1 of their 2 moves and can be done before or after moving.

Gathering Intel on a Level

When the defenders gather intel with a squad, they must declare whether they are doing so on a **sector** or on a **level**.

Gathering intel on a sector follows the normal rules for gathering intel.

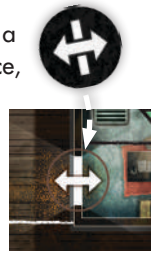

To gather intel on a level, the squad's officer must be on that level, but can be in any sector. The sniper must declare if they are on the same level as the officer in question.

On the same turn, the defenders may gather intel on multiple levels or multiple sectors, but **cannot** gather intel on both sectors **and** levels.

UNIQUE ELEMENT: LOCKED DOORS

Setup

At the start of the game, place a door token on each door space, with the unlocked side face up (showing the same icon as the board). They are considered to be in both of the spaces that they overlap.

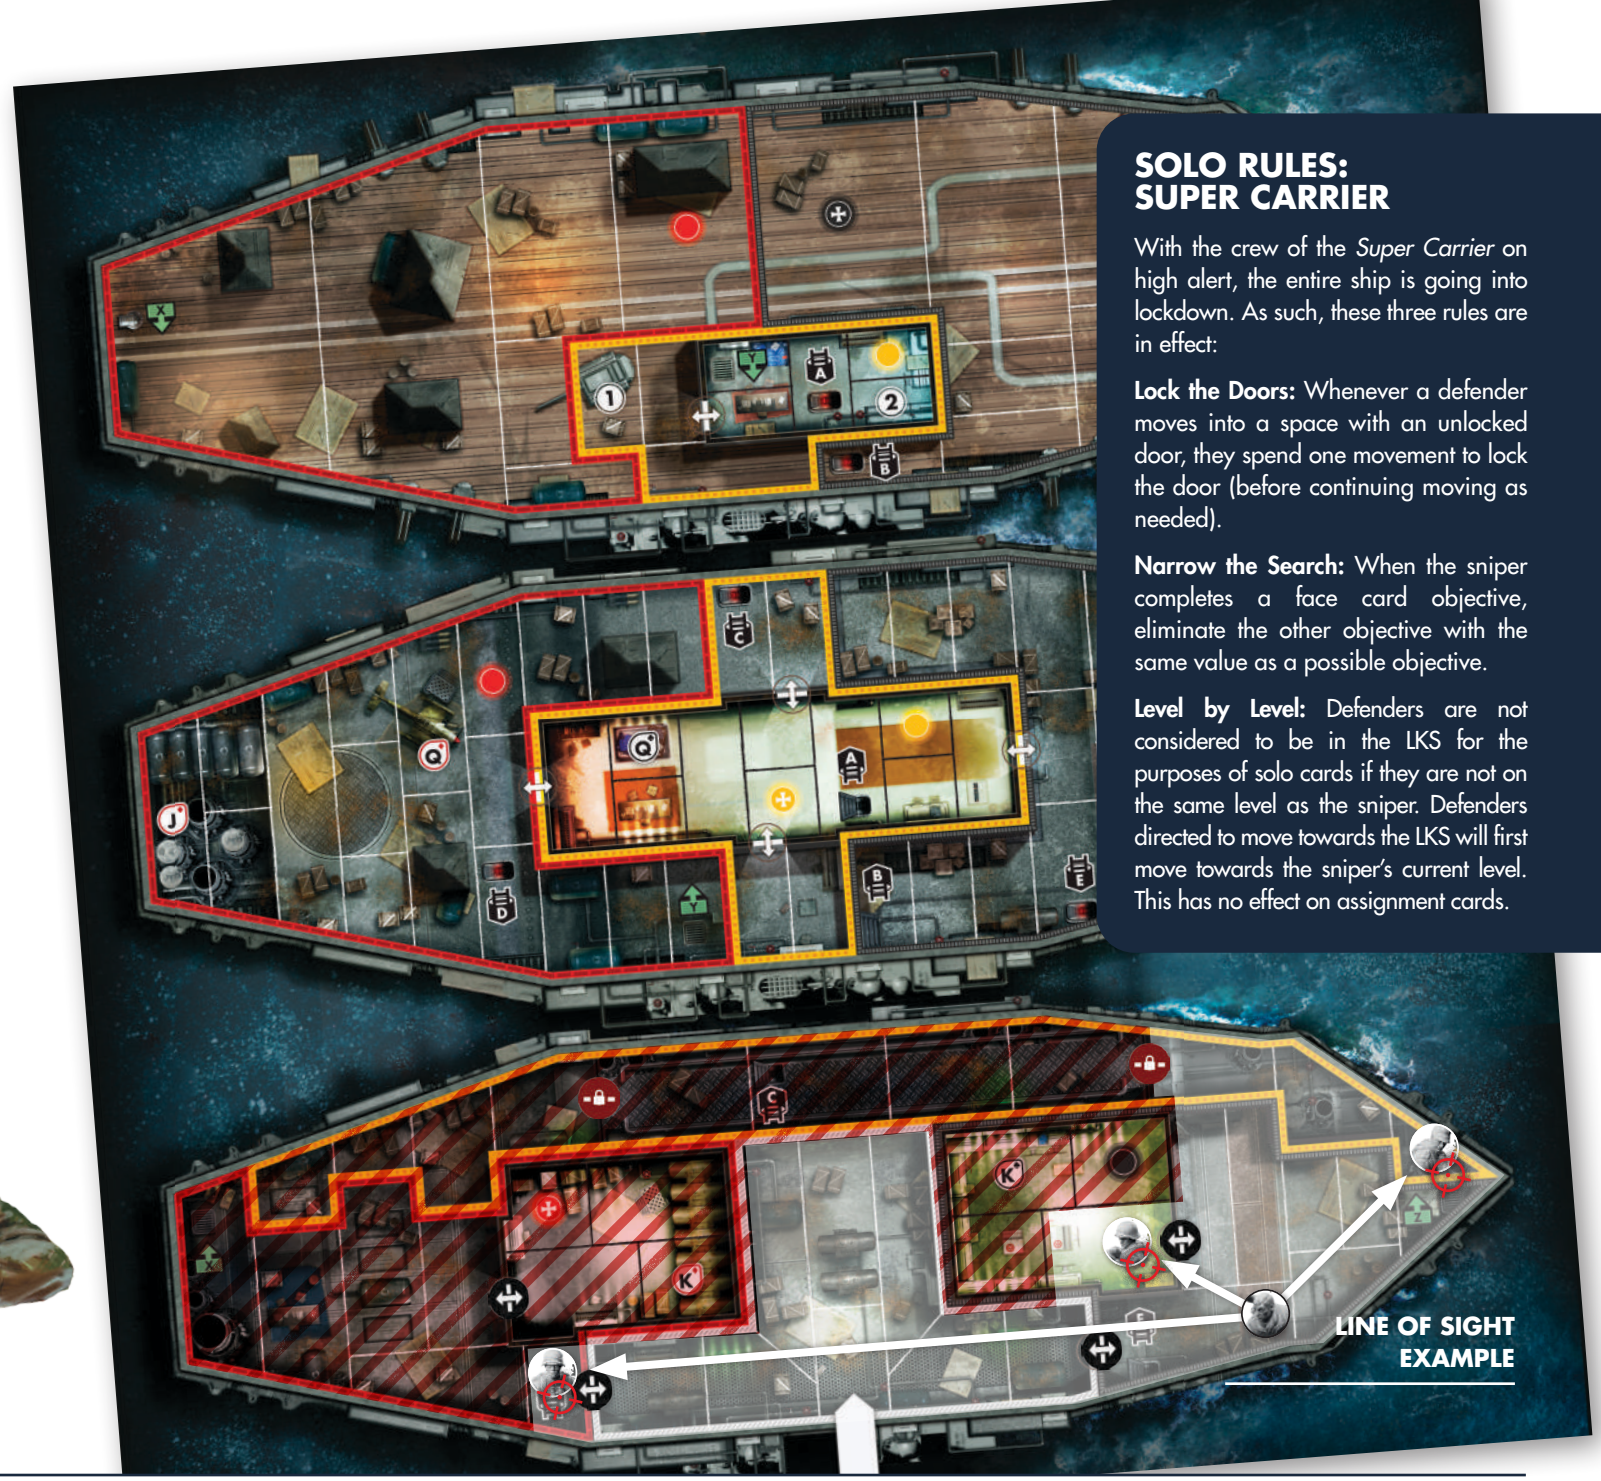

Unlocked/Locked Doors

When a door token is showing its **unlocked** side, it is treated like a normal doorway.

When a door token is showing its **locked** side, you cannot move between the two spaces, and you cannot trace line of sight into or through a space on the other side of a locked door. The defenders can lock and unlock doors.

Shooting Doors

The sniper can shoot at doors (locked or unlocked) using the normal shooting rules. On a successful shot, remove the door token from the board. It is now permanently unlocked. Don't add any tokens to the shot bag.

SOLO RULES: SUPER CARRIER

With the crew of the *Super Carrier* on high alert, the entire ship is going into lockdown. As such, these three rules are in effect:

Lock the Doors: Whenever a defender moves into a space with an unlocked door, they spend one movement to lock the door (before continuing moving as needed).

Narrow the Search: When the sniper completes a face card objective, eliminate the other objective with the same value as a possible objective.

Level by Level: Defenders are not considered to be in the LKS for the purposes of solo cards if they are not on the same level as the sniper. Defenders directed to move towards the LKS will first move towards the sniper's current level. This has no effect on assignment cards.

UNIQUE ELEMENT: REINFORCED WALLS

The walls within the *Super Carrier* are heavily fortified. It is not possible to perform actions or use effects through these walls, even those that normally target adjacent or matching-adjacent spaces. This includes the spot or sweep defender actions, the Jager's improved attack action, and the panzerfaust upgraded loadout card (from the *Escalation* expansion).

Defenders can still hear noise through the reinforced walls. In the solo mode, the scan ability also works through these walls.

Unique Line of Sight

If you can draw line of sight to a doorway, you can target the space on the opposite side of that door **if that door is unlocked,** but no further. If there is a doorway in your current space, you can trace line of sight as though you were on the other side of that doorway (peeking through the door). It is possible to shoot through two doorways, but only if you are tracing line of sight from the first door and targeting the space directly on the other side of the second.

Enclosed Areas

The internal rooms all count as distinct enclosed areas. These include the bridge on the top deck, the officer area in the middle deck, and the two engine rooms on the bottom deck. The other areas all count as open areas, even if there is a door between them.

Which spaces are open or enclosed matter for whether spaces are matching-adjacent, impacts the defenders' actions in the solo mode, and may interact with some abilities or effects.
